Intended Uses: This immunoassay kit allows for the in vitro quantitative determination of ratProto-oncogene c-Fos concentrations in serum, Plasma, Urine, tissue homogenates and Cell culture supernates and Other biological fluids.

Principle of the Assay: e microtiter plate provided in this kit has been pre-coated with an antibody specific to Proto-oncogene c-Fos. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated polyclonal antibody preparation specific for Proto-oncogene c-Fos and Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. Only those wells that contain Proto-oncogene c-Fos, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm $\pm$ 2 nm. The concentration of Proto-oncogene c-Fos in the samples is then determined by comparing the O.D. of the samples to the standard curve.
