ADDITIONAL INFORMATION

Related Product Information for anti-SEMG1 antibody	This is a rabbit polyclonal antibody against SEMG1. It was validated on Western Blot and immunohistochemistry Target Description: SEMG1 is the predominant protein in semen. The secreted protein is involved in the formation of a gel matrix that encases ejaculated spermatozoa. The prostate-specific antigen (PSA) protease processes this protein into smaller peptides, with each possibly having a separate function. The proteolysis process breaks down the gel matrix and allows the spermatozoa to move more freely. The protein encoded by this gene is the predominant protein in semen.
