ADDITIONAL INFORMATION

Related Product Information for anti-ERP29 antibody	This is a rabbit polyclonal antibody against ERP29. It was validated on Western Blot using a cell lysate as a positive control. Target Description: This gene encodes a reticuloplasmin, a protein which resides in the lumen of the endoplasmic reticulum (ER). The protein shows sequence similarity to the protein disulfide isomerase family. However, it lacks the thioredoxin motif characteristic of this family, suggesting that this protein does not function as a disulfide isomerase. The protein dimerizes and is thought to play a role in the processing of secretory proteins within the ER. Alternative splicing results in multiple transcript variants encoding different isoforms.
