ADDITIONAL INFORMATION

Related Product Information for anti-CHAF1B antibody	This is a rabbit polyclonal antibody against CHAF1B. It was validated on Western Blot and immunohistochemistry Target Description: Chromatin assembly factor I (CAF-I) is required for the assembly of histone octamers onto newly-replicated DNA. CAF-I is composed of three protein subunits, p50, p60, and p150. CHAF1B corresponds to the p60 subunit and is required for chromatin assembly after replication. CHAF1B is differentially phosphorylated in a cell cycle-dependent manner. In addition, it is normally found in the nucleus except during mitosis, when it is released into the cytoplasm. This protein is a member of the WD-repeat HIR1 family and may also be involved in DNA repair.
