ADDITIONAL INFORMATION

Related Product Information for anti-IGF2BP3 antibody	This is a rabbit polyclonal antibody against IGF2BP3. It was validated on Western Blot Target Description: The protein encoded by this gene is primarily found in the nucleolus, where it can bind to the 5' UTR of the insulin-like growth factor II leader 3 mRNA and may repress translation of insulin-like growth factor II during late development. The encoded protein contains several KH domains, which are important in RNA binding and are known to be involved in RNA synthesis and metabolism. A pseudogene exists on chromosome 7, and there are putative pseudogenes on other chromosomes.
