Related Product Information for CD47 elisa kit

Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of CD47 PROTEIN in the sample, This CD47 PROTEIN ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus CD47 PROTEIN concentration. The concentration of CD47 PROTEIN in the samples is then determined by comparing the O.D. of the samples to the standard curve.
