Related Product Information for INS elisa kit

Intended Uses: This INS kit is intended Laboratory for Research use only and is not for use in test or therapeutic procedures. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. To measure the concentration of INS in the sample, this INS Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus INS concentration. The concentration of INS in the samples is then determined by comparing the O.D. of the samples to the standard curve.
