ADDITIONAL INFORMATION

Related Product Information for CDH5 elisa kit	Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration ofVE - CADHERINin the sample, This VE - CADHERINELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versusVE - CADHERINconcentration. The concentration ofVE - CADHERINin the samples is then determined by comparing the O.D. of the samples to the standard curve.
