IMAGES

IP (Immunoprecipitation)

Detection of human Geminin by western blot of immunoprecipitates. Samples: Whole cell lysate (1.0 mg per IP reaction; 20% of IP loaded) from HeLa cells prepared using NETN lysis buffer. Antibodies: Affinity purified rabbit anti-Geminin antibody AAA211233 (lot AAA211233-2) used for IP at 3 ug per reaction. Geminin was also immunoprecipitated by rabbit anti-Geminin antibody For blotting immunoprecipitated Geminin, was used at 1 ug/ml. Detection: Chemiluminescence with an exposure time of 3 minutes.

IHC (Immunohistochemistry)

Detection of human Geminin by immunohistochemistry. Sample: FFPE section of human breast carcinoma. Antibody: Affinity purified rabbit anti-Geminin (Cat. No. AAA211233 Lot2) used at a dilution of 1:5,000 (0.2 ug/ml). Detection: DAB

ADDITIONAL INFORMATION

Related Product Information for anti-GMNN antibody	Geminin has been identified as a protein that inhibits DNA replication during S, G2, and M phases in association with Cdt1 (chromatin licensing and DNA replication factor). Geminin prevents the binding of the MCM complex onto origins of replication, and its abundance is regulated by ubiquitin ligase activity of the APC/C (anaphase-promoting/cyclosome) complex.
