IMAGES

WB (Western Blot)

Detection of human and mouse FBXO38 by western blot (h & m) and immunoprecipitation (h). Samples: Whole cell lysate from HeLa (5, 15 and 50 ug for WB; 1 mg for IP, 20% of IP loaded) and mouse NIH 3T3 (M; 50 ug) cells. Antibodies: Affinity purified rabbit anti-FBXO38 antibody AAA211860 used for WB at 0.1 ug/ml (A) and 1 ug/ml (B) and used for IP at 10 ug/mg lysate. FBXO38 was also immunoprecipitated by rabbit anti-FBXO38 antibody BL6511, which recognizes a downstream epitope. Detection: Chemiluminescence with exposure times of 3 minutes (A) and 30 seconds (B).

IHC (Immunohistochemistry)

Detection of human FBXO38 by immunohistochemistry. Sample: FFPE section of human prostate carcinoma (right) and human testicular seminoma (right). Antibody: Affinity purified rabbit anti-FBXO38 (Cat. No. AAA211860 Lot1) used at a dilution of 1:1,000 (1ug/ml). Detection: DAB

ADDITIONAL INFORMATION

Related Product Information for anti-FBXO38 antibody	FBXO38 (F-box only protein 38) is a member of the the F-box protein family. Members of this family are characterized by an approximately 40-amino acid F-box motif. FBXO38 is also known as MoKA (modulator of KLF7 activity) and originally identified as a factor that super-stimulated the activity of the Kruppel-like zinc-finger protein, KLF7, which plays a role in the gene expression of genes encoding cell cycle regulators such as p21 Waf/Cip and p27 kip.
