WB (Western Blot)

Detection of human and mouse Kindlin-2 by western blot. Samples: Whole cell lysate (50 ug) from HeLa, HEK293T, Jurkat, mouse TCMK-1, and mouse NIH 3T3 cells prepared using NETN lysis buffer. Antibodies: Affinity purified rabbit anti-Kindlin-2 antibody AAA212783 (lot AAA212783-1) used for WB at 0.1 ug/ml. Detection: Chemiluminescence with an exposure time of 30 seconds.

IP (Immunoprecipitation)

Detection of human Kindlin-2 by western blot of immunoprecipitates. Samples: Whole cell lysate (0.5 or 1.0 mg per IP reaction; 20% of IP loaded) from 293T cells prepared using NETN lysis buffer. Antibodies: Affinity purified rabbit anti-Kindlin-2 antibody AAA212783 (lot AAA212783-1) used for IP at 6 ug per reaction. Kindlin-2 was also immunoprecipitated by rabbit anti-Kindlin-2 antibody BL17335. For blotting immunoprecipitated Kindlin-2, AAA212783 was used at 0.4 ug/ml. Detection: Chemiluminescence with an exposure time of 30 seconds.

ADDITIONAL INFORMATION

Related Product Information for anti-FERMT2 antibody

Kindlin-2 is a scaffolding protein that enhances integrin activation mediated by TLN1 and/or TLN2, but activates integrins only weakly by itself. It binds to membranes enriched in phosphoinositides. It also enhances integrin-mediated cell adhesion onto the extracellular matrix and cell spreading; this requires both its ability to interact with integrins and with phospholipid membranes. Kindlin-2 is required for the assembly of focal adhesions and participates in the connection between extracellular matrix adhesion sites and the actin cytoskeleton and also in the orchestration of actin assembly and cell shape modulation. Kindlin-2 recruits FBLIM1 to focal adhesions. It plays a role in the TGFB1 and integrin signaling pathways, and it stabilizes active CTNNB1 and plays a role in the regulation of transcription mediated by CTNNB1 and TCF7L2/TCF4 and in Wnt signaling [taken from the Universal Protein Resource (UniProt) www.uniprot.org/uniprot/Q96AC1].
