ADDITIONAL INFORMATION

Related Product Information for anti-eIF2A antibody	Eukaryotic initiation factor 2A (eIF2A) directs binding of the initiator methionyl-tRNA [Met-tRNA(i)] to 40 S ribosomal subunits in a codon dependent manner. It is a 65 kDa protein that was originally believed to be the functional homolog of prokaryotic IF2. eIF2A displays functional qualities similar to eIF2 which exists as complex of 3 subunits (eIF2-alpha, beta, and gamma); however comparison of eIF2A and eIF2 has shown that these two initiation factors also display distinct functional abilities.
