

## Chicken Interferon Gamma (IFNg) RTU ELISA Kit | IFNg rtu elisa kit

Chicken Interferon Gamma (IFNg) ELISA Kit

CATALOG #  
**AAA216158**

REACTIVITY  
**Chicken**

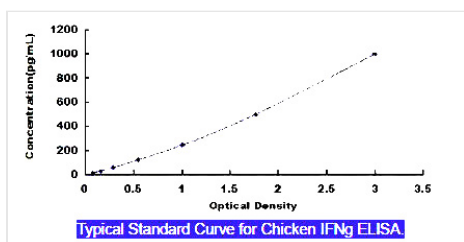

### PRODUCT SYNONYMS

Interferon Gamma (IFNg); Chicken Interferon Gamma (IFNg) ELISA Kit; IFN-G; IFG; IFI; INFr; IFN; Immune Interferon; IFNg rtu elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Chicken                                                                                                                                                                                                                                                                                                                                             |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of IFNg. No significant cross-reactivity or interference between IFNg and analogues was observed.                                                                                                                                                                           |
| Sequence Length         | 164                                                                                                                                                                                                                                                                                                                                                 |
| Samples                 | Serum, plasma, tissue homogenates, cell lysates, cell culture supernates or other biological fluids                                                                                                                                                                                                                                                 |
| Assay Type              | Quantitative Sandwich                                                                                                                                                                                                                                                                                                                               |
| Detection Range         | 15.6-1000pg/mL                                                                                                                                                                                                                                                                                                                                      |
| Sensitivity             | < 5.8pg/mL                                                                                                                                                                                                                                                                                                                                          |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level IFNg were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                              |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level IFNg were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                            |
| Preparation and Storage | For unopened kits: All the reagents should be kept at 4 degree C upon receipt.<br>For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal. |

|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Related Product Information for IFNg rtu elisa kit | <p>Intended Uses: The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of IFNg in chicken serum, plasma, tissue homogenates, cell lysates, cell culture supernates or other biological fluids.</p> <p>Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to IFNg. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to IFNg. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain IFNg, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of IFNg in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> |
