

# Rat Amiloride Sensitive Sodium Channel Subunit Alpha (SCNN1a) RTU ELISA Kit | SCNN1a rtu elisa kit

Rat Amiloride Sensitive Sodium Channel Subunit Alpha (SCNN1a) ELISA Kit

CATALOG #  
**AAA218317**

REACTIVITY  
**Rat**

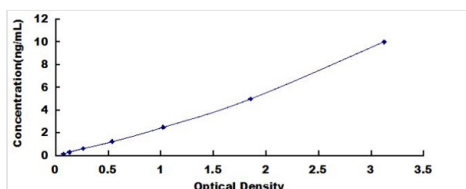

## PRODUCT SYNONYMS

Amiloride Sensitive Sodium Channel Subunit Alpha (SCNN1a); Rat Amiloride Sensitive Sodium Channel Subunit Alpha (SCNN1a) ELISA Kit; ENaCa; ENaCalpha; SCNEA; SCNN1; Sodium Channel; Nonvoltage-Gated 1; Alpha; Epithelial Na(+) channel subunit alpha; Nonvoltage-gated sodium channel 1 subunit alpha; SCNN1a rtu elisa kit

## PRODUCT SPECIFICATIONS

|                           |                                                                                                                                                                                                                                                                                                                                                     |

| Reactivity                | Rat                                                                                                                                                                                                                                                                                                                                                 |
| Sequence Length           | 699                                                                                                                                                                                                                                                                                                                                                 |
| Assay Type                | Sandwich                                                                                                                                                                                                                                                                                                                                            |
| Samples                   | Serum, Plasma, Tissue Homogenates or Other Biological Fluids.                                                                                                                                                                                                                                                                                       |
| Detection Range           | 0.156-10ng/mL                                                                                                                                                                                                                                                                                                                                       |
| Sensitivity               | 0.059ng/mL                                                                                                                                                                                                                                                                                                                                          |
| RTU ELISA Kit's Advantage | The Ready-To-Use (RTU) Kits require fewer steps in setup and take less time to run. Detection Solutions are pre-diluted and total incubation time is shorter than many other ELISA Kits.                                                                                                                                                            |
| Preparation and Storage   | For unopened kits: All the reagents should be kept at 4 degree C upon receipt.<br>For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal. |

Standard Curve (Sample)

## ADDITIONAL INFORMATION

### Related Product Information for SCNN1a rtu elisa kit

**Test Principle:** The microtiter plate provided in this kit has been pre-coated with an antibody specific to SCNN1a. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to SCNN1a. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain SCNN1a, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$  10nm. The concentration of SCNN1a in the samples is then determined by comparing the O.D. of the samples to the standard curve.
