

Rat Endothelin Receptor A (ETRA) RTU ELISA Kit | ETRA rtu elisa kit

Rat Endothelin Receptor A (ETRA) RTU ELISA Kit

CATALOG #
AAA219693

REACTIVITY
Rat

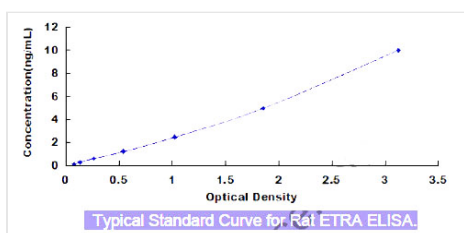

PRODUCT SYNONYMS

Endothelin Receptor A (ETRA); Rat Endothelin Receptor A (ETRA) RTU ELISA Kit; ETRA rtu elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of ETRA. No significant cross-reactivity or interference between ETRA and analogues was observed.
Purity/Purification	Affinity Purification
Sequence Length	201
Samples	Rat Serum, Plasma, Tissue Homogenates Or Other Biological Fluids
Assay Type	Quantitative Sandwich
Detection Range	0.156-10ng/mL
Sensitivity	0.040g/mL.
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level ETRA were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level ETRA were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for ETRA rtu elisa kit	Intended Uses: The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of ETRA in rat serum, plasma, tissue homogenates or other biological fluids. Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to ETRA. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to ETRA. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain ETRA, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of ETRA in the samples is then determined by comparing the O.D. of the samples to the standard curve.
