Assay Information	A test is defined as the amount (ug) of antibody that will stain a cell sample in a final volume of 100 ul. Cell number should be determined empirically but can range from 10 ⁵ to 10 ⁸ cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
Cross Reactivity	Mouse
Conjugate	FITC
Biological Significance	The H35-17.2 monoclonal antibody reacts with the mouse CD8beta molecule. The CD8beta chain associates with the CD8 alpha chain to form the CD8 alpha/beta heterodimer expressed on the surface of a majority of thymocytes, and on peripheral cytotoxic alpha beta TCR T cells. CD8 binds to MHC class I and plays a role in T cell development and activation of mature T cells.
Preparation and Storage	Store at 4°C. Do not freeze. Protect from light.
