ADDITIONAL INFORMATION

Related Product Information for anti-CX43 antibody	Connexin 43 is a member of the connexin family. The encoded protein is a component of gap junctions, which are composed of arrays of intercellular channels that provide a route for the diffusion of low molecular weight materials from cell to cell. The encoded protein is the major protein of gap junctions in the heart that are thought to have a crucial role in the synchronized contraction of the heart and in embryonic development.
