ADDITIONAL INFORMATION

Related Product Information for Phenylacetyl-Coenzyme A (sodium salt) biochemical	Phenylacetyl-coenzyme A (CoA) is a key intermediate in aerobic catabolism of phenylacetate in bacteria such as <i>Pseudomonas</i> , when cultured in minimal media using phenylacetate as the sole carbon source. ¹ It is a precursor in the synthesis of the antibiotic penicillin G found in industrial strains of <i>P. chrysogenum</i> . Phenylacetyl-CoA also acts as an effector molecule of the TetR family transcriptional repressor PaaR in <i>T. thermophilus</i> and the GntR family transcriptional regulator PaaX in <i>E. coli</i> and <i>Pseudomonas</i> , binding to each protein to induce derepression of various genes. ²
