

## KSPWFTTL biochemical

KSPWFTTL

CATALOG #  
AAA227775

### PRODUCT SYNONYMS

KSPWFTTL; KSPWFTTL biochemical

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purity/Purification     | 98%                                                                                                                                                                                                                                     |
| CAS                     | 153049-05-9                                                                                                                                                                                                                             |
| Solubility              | <1mg/ml refers to the product slightly soluble or insoluble                                                                                                                                                                             |
| In vitro                | KSPWFTTL is derived from the retroviral p15 TM envelope protein. The cytolytic T-lymphocyte (CTL)-insusceptible, variant cl.18-5 clonal line, after pulsed with the KSPWFTTL peptide, becomes susceptible to lysis by antiviral CTL[2]. |
| Preparation and Storage | Powder: -20 degree C for 3 years<br>In solvent: -80 degree C for 2 years                                                                                                                                                                |
