

Tiludronate disodium/hemihydrate Biochemical

Tiludronate disodium/hemihydrate

CATALOG #
AAA227793

PRODUCT SYNONYMS

Tiludronate disodium/hemihydrate; GSK 269962 hydrochloride; Tiludronate disodium/hemihydrate biochemical

PRODUCT SPECIFICATIONS

Purity/Purification	98%
CAS	155453-10-4
Solubility	<1mg/ml refers to the product slightly soluble or insoluble
In vitro	Tiludronate exerts a dose-dependent inhibitory activity on bone resorption. Tiludronate could act on mature osteoclasts by reducing their capacity to secrete proton into the resorption space and also by favoring their detachment from the bone matrix. Tiludronate is also tested in other models of osteoporosis. In the castrated male rat model, Tiludronate (5-200 mg/kg; p.o.) prevents the decrease in the skeletal mass, assessed physically by measuring the bone weight and density or chemically by determining the calcium and phosphate content[3].
Preparation and Storage	Powder: -20 degree C for 3 years In solvent: -80 degree C for 2 years

ADDITIONAL INFORMATION

Related Product Information for Tiludronate disodium/hemihydrate biochemical	Tiludronate (Tiludronic Acid) disodium/hemihydrate, an orally active bisphosphonate, can act as an osteoregulator. Tiludronate disodium/hemihydrate is used for the research of the metabolic bone disorders. Tiludronate disodium/hemihydrate is a potent inhibitor of the osteoclast vacuolar H ⁺ -ATPase. Antiresorptive and anti-inflammatory properties[4].
