

MLN120B dihydrochloride Biochemical | MLN120B biochemical

MLN120B dihydrochloride

CATALOG #
AAA227895

PRODUCT SYNONYMS

MLN120B dihydrochloride; MLN120B biochemical

PRODUCT SPECIFICATIONS

Purity/Purification	98%
CAS	1782573-78-7
Solubility	<1mg/ml refers to the product slightly soluble or insoluble
In vitro	MLN120B (oral administration; 50 mg/kg; twice daily; 3 weeks) induces a reduction of shuIL-6R, marker of tumor growth, marker of tumor growth. It also leads to a trend toward prolonged survival in animals treated versus control[1]. MLN120B (oral administration; 50 mg/kg; twice daily; 3 weeks) induces a reduction of shuIL-6R, marker of tumor growth, marker of tumor growth. It also leads to a trend toward prolonged survival in animals treated versus control[3]. Animal Model: SCID mice implanted with human fetal bone chips and then INA6 cells are directly injected into mice[1]. Dosage: 50 mg/kg. Administration: Oral administration; twice daily; 3 weeks. Result: Inhibited human multiple myeloma cell growth in vivo. Animal Model: Two-month-old female Lewis rats[2]. Dosage: 30 mg/kg, 10 mg/kg, 3mg/kg, or 1 mg/kg. Administration: Oral administration; twice daily; 3 weeks. Result: Protected against bone and cartilage destruction in a rat model.
Preparation and Storage	Powder: -20 degree C for 3 years In solvent: -80 degree C for 2 years

ADDITIONAL INFORMATION

Related Product Information for MLN120B biochemical

MLN120B dihydrochloride (MLN120B dihydrochloride) is a potent, ATP competitive, and orally active inhibitor of IKKbeta with an IC 50 of 60 nM. MLN120B inhibits multiple myeloma cell growth in vitro and in vivo and also can be used for the research of rheumatoid arthritis.
