

AM-8123 Biochemical

AM-8123

CATALOG #
AAA228052

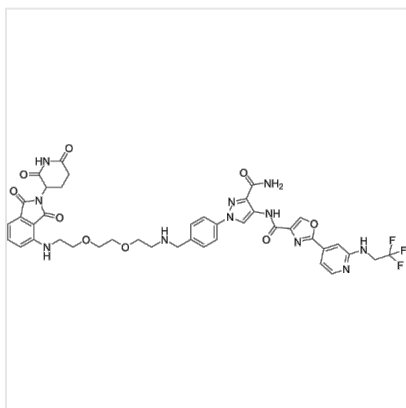

PRODUCT SYNONYMS

AM-8123; AM-8123 biochemical

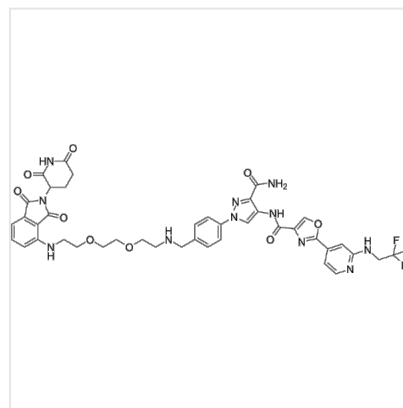

PRODUCT SPECIFICATIONS

Purity/Purification	98%
CAS	2049973-02-4
Solubility	<1mg/ml refers to the product slightly soluble or insoluble
In vitro	AM-8123 (100 mg/kg; p.o.) results in sustained improvement in systolic function and decreases both EDV and ESV as measured by echocardiography but not by the invasive pressure-volume conductance catheter at study termination[1]. AM-8123 (0.035, 0.09, 0.9, and 9 mg/kg; i.v.) improves cardiovascular function[1]. AM-8123 exhibits appreciably greater oral bioavailability in rats and dogs relative to pyr-apelin-13. AM-8123 infusion results in an increase in EF, SV, and dP/dt max at submicromolar unbound plasma concentrations with minimal change in HR, indicating that acute infusion of AM-8123 is associated with an improvement in several markers of cardiac function. AM-8123 is a more potent mediator of both ERK and AKT phosphorylation relative to pyr-apelin-13[1]. Animal Model: Lewis rats (2~3 months old)[1]. Dosage: 100 mg/kg. Administration: P.o. Result: Resulted in sustained improvement in systolic function. Decreased both EDV and ESV as measured by echocardiography but not by the invasive pressure-volume conductance catheter at study termination. Animal Model: Rats[1]. Dosage: 0.035, 0.09, 0.9, and 9 mg/kg. Administration: I.v. Result: Improved cardiovascular function.
Preparation and Storage	Powder: -20 degree C for 3 years In solvent: -80 degree C for 2 years

ADDITIONAL INFORMATION

Related Product Information for AM-8123 biochemical

AM-8123 is an orally active and potent APJ agonist. AM-8123 inhibits Forskolin-stimulated cAMP production and promotes Galpha protein activation. AM-8123 can be used for the research of cardiovascular disease.
