

## Human Ornithine Aminotransferase (OAT) ELISA Kit | OAT elisa kit

Human Ornithine Aminotransferase (OAT) ELISA Kit

CATALOG #  
**AAA23049**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Ornithine Aminotransferase (OAT); Human Ornithine Aminotransferase (OAT) ELISA Kit; HOGA; Grate Arophy; Ornithine delta-aminotransferase; Ornithine--oxo-acid aminotransferase; OAT elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of OAT. No significant cross-reactivity or interference between OAT and analogues was observed.                                                                                                                                                                                                                                                                                                                    |
| Sequence Length         | 408                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Samples                 | Human tissue homogenates, cell lysates and other biological fluids                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Detection Range         | 1.56-100ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Sensitivity             | < 0.71ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level OAT were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                                                                                                                                                                      |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level OAT were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                                                                                                                                                                    |
| Preparation and Storage | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for OAT elisa kit | Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to OAT. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to OAT. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain OAT, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of OAT in the samples is then determined by comparing the O.D. of the samples to the standard curve. |
