ADDITIONAL INFORMATION

Related Product Information for anti-MYOF antibody	This is a rabbit polyclonal antibody against FER1L3. It was validated on Western Blot using a cell lysate as a positive control. Target Description: Mutations in dysferlin, a protein associated with the plasma membrane, can cause muscle weakness that affects both proximal and distal muscles. FER1L3 is a type II membrane protein that is structurally similar to dysferlin. It is a member of the ferlin family and associates with both plasma and nuclear membranes. The protein contains C2 domains that play a role in calcium-mediated membrane fusion events, suggesting that it may be involved in membrane regeneration and repair. Two transcript variants encoding different isoforms have been found for this gene. Other possible variants have been detected, but their full-length natures have not been determined.
