Intended Uses: This RICIN ANTIBODY ELISA kit is intended Laboratory for Research use only and is not for use in diagnostic or therapeutic procedures. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of RICIN ANTIBODY in the sample, this RICIN ANTIBODY ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus RICIN ANTIBODY concentration. The concentration of RICIN ANTIBODY in the samples is then determined by comparing the O.D. of the samples to the standard curve.
