

## Mouse Conglutinin (CGN1) ELISA Kit | CGN1 elisa kit

Mouse Conglutinin (CGN1) ELISA Kit

CATALOG #  
**AAA244666**

REACTIVITY  
**Mouse**

### PRODUCT SYNONYMS

Conglutinin (CGN1); Mouse Conglutinin (CGN1) ELISA Kit; CGN1 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                            |
|-------------------------|----------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                      |
| Samples                 | Serum, Plasma, Cell Culture Supernatants, Body Fluid And Tissue Homogenate |
| Assay Type              | Quantitative Competitive                                                   |
| Sensitivity             | 1.0 ug/mL.                                                                 |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                        |

### ADDITIONAL INFORMATION

#### Related Product Information for CGN1 elisa kit

**Intended Uses:** This CGN1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Bovine CGN1. This ELISA kit for research use only!

**Principle of the Assay:** CGN1 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-CGN1 antibody and an CGN1-HRP conjugate. The assay sample and buffer are incubated together with CGN1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CGN1 concentration since CGN1 from samples and CGN1-HRP conjugate compete for the anti-CGN1 antibody binding site. Since the number of sites is limited, as more sites are occupied by CGN1 from the sample, fewer sites are left to bind CGN1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CGN1 concentration in each sample is interpolated from this standard curve.
