

Human gonadotropin stabilize factor ELISA Kit | GnSAF elisa kit

Human gonadotropin stabilize factor ELISA Kit

CATALOG #
AAA247169

REACTIVITY
Human

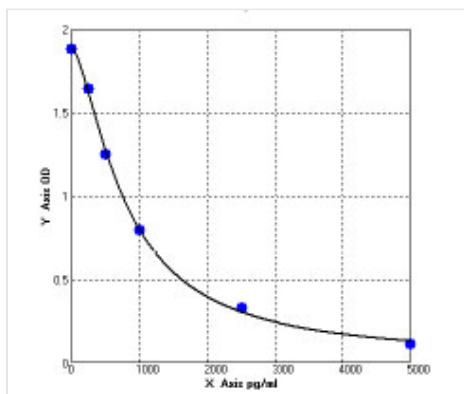

PRODUCT SYNONYMS

gonadotropin stabilize factor; Human gonadotropin stabilize factor ELISA Kit; GnSAF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of GnSAF. No significant cross-reactivity or interference between GnSAF and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between GnSAF and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL

ADDITIONAL INFORMATION

Related Product Information for GnSAF elisa kit	Intended Uses: This GnSAF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human GnSAF. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: GnSAF ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-GnSAF antibody and an GnSAF-HRP conjugate. The assay sample and buffer are incubated together with GnSAF-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GnSAF concentration since GnSAF from samples and GnSAF-HRP conjugate compete for the anti-GnSAF antibody binding site. Since the number of sites is limited, as more sites are occupied by GnSAF from the sample, fewer sites are left to bind GnSAF-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GnSAF concentration in each sample is interpolated from this standard curve.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
