

Chicken Phospho Interferon Regulatory Factor 3 ELISA Kit | pIRF3 elisa kit

Chicken Phospho Interferon Regulatory Factor 3 ELISA Kit

CATALOG #
AAA247560

REACTIVITY
Chicken

PRODUCT SYNONYMS

Phospho Interferon Regulatory Factor 3; Chicken Phospho Interferon Regulatory Factor 3 ELISA Kit; pIRF3 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Specificity	This assay has high sensitivity and excellent specificity for detection of pINFRF3. No significant cross-reactivity or interference between pINFRF3 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between pINFRF3 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL
Reactivity Note	No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.
Preparation and Storage	Store at 2-8 degree C. The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.

ADDITIONAL INFORMATION

Related Product Information for pIRF3 elisa kit	Intended Uses: This pINFRF3 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken pINFRF3. This ELISA kit for research use only! Principle of the Assay: pINFRF3 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-pINFRF3 antibody and an pINFRF3-HRP conjugate. The assay sample and buffer are incubated together with pINFRF3-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the pINFRF3 concentration since pINFRF3 from samples and pINFRF3-HRP conjugate compete for the anti-pINFRF3 antibody binding site. Since the number of sites is limited, as more sites are occupied by pINFRF3 from the sample, fewer sites are left to bind pINFRF3-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The pINFRF3 concentration in each sample is interpolated from this standard curve.
Product Categories/Family for pIRF3 elisa kit	Immunology; Epigenetics and Nuclear Signaling

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
