

Mouse Caspase-1 subunit p20 (CASP1p20) ELISA Kit | CASP1p20 elisa kit

Mouse Caspase-1 subunit p20 (CASP1p20) ELISA Kit

CATALOG #
AAA247586

REACTIVITY
Mouse

PRODUCT SYNONYMS

Caspase-1 subunit p20 (CASP1p20); Mouse Caspase-1 subunit p20 (CASP1p20) ELISA Kit; CASP1p20 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of CASP1p20. No significant cross-reactivity or interference between CASP1p20 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between CASP1p20 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL
Preparation and Storage	Store at 2-8 degree C. The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.

ADDITIONAL INFORMATION

Related Product Information for CASP1p20 elisa kit	Intended Uses: This CASP1p20 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse CASP1p20. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: CASP1p20 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-CASP1p20 antibody and an CASP1p20-HRP conjugate. The assay sample and buffer are incubated together with CASP1p20-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CASP1p20 concentration since CASP1p20 from samples and CASP1p20-HRP conjugate compete for the anti-CASP1p20 antibody binding site. Since the number of sites is limited, as more sites are occupied by CASP1p20 from the sample, fewer sites are left to bind CASP1p20-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CASP1p20 concentration in each sample is interpolated from this standard curve.
