

Human Lipid Hydroperoxide ELISA Kit | LOOH elisa kit

Human Lipid Hydroperoxide ELISA Kit

CATALOG #
AAA247628

REACTIVITY
Human

PRODUCT SYNONYMS

Lipid Hydroperoxide; Human Lipid Hydroperoxide ELISA Kit; LOOH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of LOOH. No significant cross-reactivity or interference between LOOH and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between LOOH and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Intra-Assay	CV<10%
Inter-Assay	CV<15%
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for LOOH elisa kit	Principle of the Assay: LOOH ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-LOOH antibody and an LOOH-HRP conjugate. The assay sample and buffer are incubated together with LOOH-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the LOOH concentration since LOOH from samples and LOOH-HRP conjugate compete for the anti-LOOH antibody binding site. Since the number of sites is limited, as more sites are occupied by LOOH from the sample, fewer sites are left to bind LOOH-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The LOOH concentration in each sample is interpolated from this standard curve. Intended Uses: This LOOH ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human LOOH. This ELISA kit for research use only, not for therapeutic or test applications!
--	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
