

Chicken Quinolinic Acid ELISA Kit

Chicken Quinolinic Acid ELISA Kit

CATALOG #
AAA247747

REACTIVITY
Chicken

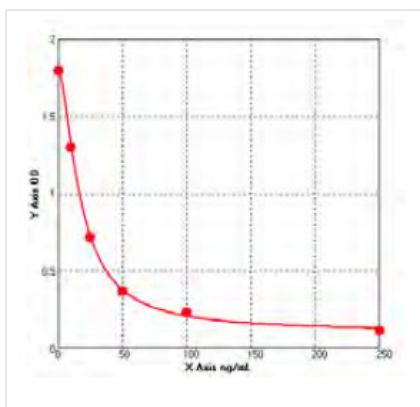

PRODUCT SYNONYMS

Quinolinic Acid; Chicken Quinolinic Acid ELISA Kit; Quinolinic Acid elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Specificity	This assay has high sensitivity and excellent specificity for detection of QA. No significant cross-reactivity or interference between QA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between QA and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Intra-Assay	CV<10%
Inter-Assay	CV<15%
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Quinolinic Acid elisa kit	Principle of the Assay: QA ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-QA antibody and an QA-HRP conjugate. The assay sample and buffer are incubated together with QA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the QA concentration since QA from samples and QA-HRP conjugate compete for the anti-QA antibody binding site. Since the number of sites is limited, as more sites are occupied by QA from the sample, fewer sites are left to bind QA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The QA concentration in each sample is interpolated from this standard curve. Intended Uses: This QA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken QA. This ELISA kit for research use only, not for therapeutic or test applications!
---	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
