

## Human chenodeoxycholic acid (CDCA) ELISA Kit | CDCA elisa kit

Human chenodeoxycholic acid (CDCA) ELISA Kit

CATALOG #  
**AAA247767**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

chenodeoxycholic acid (CDCA); Human chenodeoxycholic acid (CDCA) ELISA Kit; CDCA elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                    |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of CDCA. No significant cross-reactivity or interference between CDCA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between CDCA and all the analogues, therefore, cross reaction may still exist in some cases. |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                               |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                                                                                                                                                                                                 |
| Sensitivity             | 1.0 nmol/L                                                                                                                                                                                                                                                                                                                                                                               |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                      |

| <b>Related Product Information for CDCA elisa kit</b> | <p>Intended Uses: This CDCA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human CDCA. This ELISA kit for research use only, not for therapeutic or test applications!</p> <p>Principle of the Assay: CDCA ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-CDCA antibody and an CDCA-HRP conjugate. The assay sample and buffer are incubated together with CDCA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CDCA concentration since CDCA from samples and CDCA-HRP conjugate compete for the anti-CDCA antibody binding site. Since the number of sites is limited, as more sites are occupied by CDCA from the sample, fewer sites are left to bind CDCA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CDCA concentration in each sample is interpolated from this standard curve.</p> |
