

Human taurochenodeoxycholic acid (TCDCA) ELISA Kit | TCDCA elisa kit

Human taurochenodeoxycholic acid (TCDCA) ELISA Kit

CATALOG #
AAA247768

REACTIVITY
Human

PRODUCT SYNONYMS

taurochenodeoxycholic acid (TCDCA); Human taurochenodeoxycholic acid (TCDCA) ELISA Kit; TCDCA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of TCDCA. No significant cross-reactivity or interference between TCDCA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between TCDCA and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 nmol/L
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for TCDCA elisa kit	Intended Uses: This TCDCA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human TCDCA. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: TCDCA ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-TCDCA antibody and an TCDCA-HRP conjugate. The assay sample and buffer are incubated together with TCDCA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TCDCA concentration since TCDCA from samples and TCDCA-HRP conjugate compete for the anti-TCDCA antibody binding site. Since the number of sites is limited, as more sites are occupied by TCDCA from the sample, fewer sites are left to bind TCDCA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TCDCA concentration in each sample is interpolated from this standard curve.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
