

Porcine Daidzein ELISA Kit | DD elisa kit

Porcine Daidzein ELISA Kit

CATALOG # AAA247837	REACTIVITY Porcine	APPLICATIONS ELISA
-------------------------------	------------------------------	------------------------------

PRODUCT SYNONYMS

Daidzein; Porcine Daidzein ELISA Kit; DD elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Specificity	This assay has high sensitivity and excellent specificity for detection of DD. No significant cross-reactivity or interference between DD and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between DD and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 ng/ml
Applicable Applications for DD elisa kit	ELISA
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for DD elisa kit	Principle of the Assay: DD ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-DD antibody and an DD-HRP conjugate. The assay sample and buffer are incubated together with DD-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the DD concentration since DD from samples and DD-HRP conjugate compete for the anti-DD antibody binding site. Since the number of sites is limited, as more sites are occupied by DD from the sample, fewer sites are left to bind DD-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The DD concentration in each sample is interpolated from this standard curve. Intended Uses: This DD ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine DD. This ELISA kit for research use only, not for therapeutic or test applications!
