

## Canine TM (Thrombomodulin) ELISA Kit | TM elisa kit

Canine TM (Thrombomodulin) ELISA Kit

CATALOG #  
**AAA248694**

REACTIVITY  
**Canine**

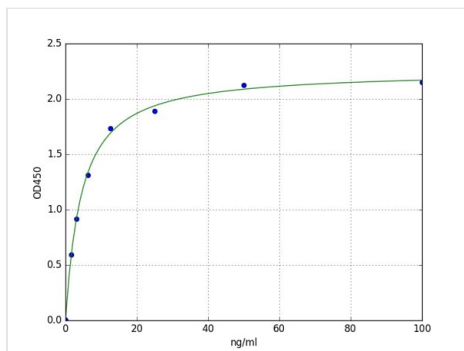

### PRODUCT SYNONYMS

TM (Thrombomodulin); Canine TM (Thrombomodulin) ELISA Kit; TM elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                              |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Canine                                                                                                                                                       |
| Sequence Length         | 575                                                                                                                                                          |
| Assay Type              | Sandwich ELISA, Double Antibody                                                                                                                              |
| Samples                 | Serum, Plasma, Cell Culture Supernatant, cell or tissue lysate, Other liquid samples                                                                         |
| Detection Range         | 15.625-1000pg/ml                                                                                                                                             |
| Sensitivity             | 9.375pg/ml                                                                                                                                                   |
| Preparation and Storage | Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C |

### ADDITIONAL INFORMATION

#### Related Product Information for TM elisa kit

**Principle of the Assay:** This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti-TM antibody was pre-coated onto 96-well plates. And the biotin conjugated anti-TM antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and wash with wash buffer. HRP-Streptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the TM amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of TM can be calculated.
