Immunogen	A synthetic peptide corresponding to the center region of the Human HSPB8/Cryac
Conjugation	Unconjugated
Preparation	Produced in rabbits immunized with a synthetic peptide corresponding to the center region of the Human HSPB8/Cryac, and purified by antigen affinity chromatography.
Preparation and Storage	This antibody can be stored at 2-8 degree C for one month without detectable loss of activity. Antibody products are stable for twelve months from date of receipt when stored at -20 degree C to -80 degree C. Avoid repeated freeze-thaw cycles.

IF (Immunofluorescence)
Immunofluorescence staining of HSPB8 in HeLa cells. Cells were fixed with 4% PFA, permeabilized with 0.1% Triton X-100 in PBS, blocked with 10% serum, and incubated with rabbit anti-human HSPB8 polyclonal antibody (dilution ratio 1:1000) at 4 degree C overnight. Then cells were stained with the Alexa Fluor488-conjugated Goat Anti-rabbit IgG secondary antibody (green). Positive staining was localized to nucleus and cytoplasm.

IHC (Immunohistochemistry)
Immunochemical staining HSPB8 in rat heart with rabbit polyclonal antibody at 1:200 dilution, formalin-fixed paraffin embedded sections.

IHC (Immunohistochemisry)
Immunochemical staining HSPB8 in mouse heart with rabbit polyclonal antibody at 1:200 dilution, formalin-fixed paraffin embedded sections.

IHC (Immunohiostchemistry)
Immunochemical staining HSPB8 in cynomolgus heart with rabbit polyclonal antibody at 1:200 dilution, formalin-fixed paraffin embedded sections.

IHC (Immunohistochemistry)
Immunochemical staining HSPB8 in human skeletal muscle with rabbit polyclonal antibody at 1:200 dilution, formalin-fixed paraffin embedded sections.
