| Applicable Applications for anti-SFT2D2 antibody | IHC (Immunohistochemistry)                                                                                                                                                                                                                         |
| Immunogen                                        | E Coli-derived Human SFT2D2 fragment                                                                                                                                                                                                               |
| Conjugation                                      | Unconjugated                                                                                                                                                                                                                                       |
| Preparation                                      | Produced in rabbits immunized with E Coli-derived Human SFT2D2 fragment, and purified by antigen affinity chromatography.                                                                                                                          |
| Preparation and Storage                          | This antibody can be stored at 2-8 degree C for one month without detectable loss of activity. Antibody products are stable for twelve months from date of receipt when stored at -20 degree C to -80 degree C. Avoid repeated freeze-thaw cycles. |

| Related Product Information for anti-SFT2D2 antibody | SFT2D2 (SFT2 Domain Containing 2) is located on human chromosome 1q24.2. An important paralog of this gene is SFT2D1. The SFT2D2 (also known as DJ747L4.C1.2 or UNQ512) gene is conserved in chimpanzee, Rhesus monkey, dog, cow, mouse, rat, chicken, zebrafish, A.thaliana, rice, and frog. SFT2D2 may be involved in fusion of retrograde transport vesicles derived from an endocytic compartment with the Golgi complex. |
