ADDITIONAL INFORMATION

Related Product Information for anti-TPRX1 antibody	Homeobox genes encode DNA-binding proteins, many of which are thought to be involved in early embryonic development. Homeobox genes encode a DNA-binding domain of 60 to 63 amino acids referred to as the homeodomain. The TPRX1 gene is a member of the TPRX homeobox gene family. TPRX1 (Tetrapeptide Repeat Homeobox 1, also known as TPRX) is located on human chromosome 19q13.33. 24 organisms have orthologs with human gene TPRX1. TPRX1 is related to Preimplantation Embryo. TPRX1 is also related to sequence-specific DNA binding.
