Protein Construction	A DNA sequence encoding the mouse IFNA2 (P01573)(Cys 24-Glu 190) was fused with the Fc region of human IgG1 at the N-terminus.
Reconstitution	A hardcopy of COA with reconstitution instruction is sent along with the products. Please refer to it for detailed information.
Activity	1. Measured in antiviral assays using L929 cells infected with vesicular stomatitisvirus (VSV). The ED50 for this effect is 0.1-0.8ng/mL. 2. Measured by its binding ability in a functional ELISA. Immobilized mouse IFNAR1-His at 10ug/ml (100uL/well) can bind mouse Fc-IFNA2. The EC50 of mouse Fc-IFNA2 is 0.8-1.9ug/ml.
Preparation and Storage	Samples are stable for up to twelve months from date of receipt at -20 degree C to -80 degree C. Store it under sterile conditions at -20 degree C to -80 degree C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice.

ADDITIONAL INFORMATION

Related Product Information for IFNA2 active protein	Background: IFNA2 (Interferon Alpha 2) is a Protein Coding gene. This gene is a member of the alpha interferon gene cluster on chromosome 9. The encoded protein is a cytokine produced in response to viral infection. Type I Interferons (IFNs) are well-known cytokines that exert antiviral activity, antitumor activity, and immunomodulatory effects. Interferon tau (IFNT), a type I IFN similar to alpha IFNs (IFNA), is the pregnancy recognition signal produced by the ruminant conceptus. Among the IFN-alpha genes, a total of 28 different sequence variants have been described. The three principal subtypes of IFNalpha-2 are designated alpha-2a, alpha-2b, and alpha-2c. IFNalpha-2b is being the predominant allele while IFNalpha-2a is less predominant and IFNalpha-2c only a minor allelic variant.
