

Mouse IL18R1 ELISA Kit | IL18R1 elisa kit

Mouse IL18R1 ELISA Kit

CATALOG #
AAA258473

REACTIVITY
Mouse

PRODUCT SYNONYMS

IL18R1; Mouse IL18R1 ELISA Kit; IL-18Ralpha ELISA Kit; Mouse; interleukin 18 receptor 1; IL18Ralpha ELISA Kit; IL18R1 ELISA Kit; IL18R1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	For the quantitative determination of Mouse IL18R1 concentration in cell lysate.
Assay Type	Solid Phase Sandwich ELISA (quantitative)
Sample Types	Lysate
Detection Range	18.75-1200pg/mL
Sensitivity	6.06pg/mL
Conjugation	HRP
Materials Provided	1. 96 well microplate coated with Capture Antibody 2. Detection Antibody conjugated to HRP 3. Standards 4. Wash Buffer Concentrate 5. Dilution Buffer Concentrate 6. Color Reagent A 7. Color Reagent B 8. Stop Solution

Application Data

This assay recognizes both recombinant and natural Mouse IL18R1. The factors listed below were prepared at 50ng/mL in dilution buffer and assayed for cross-reactivity. No cross-reactivity was observed.

Concentration (pg/mL)	Zero standard subtracted OD
0	0
18.75	0.068
37.5	0.133
75	0.246
150	0.478
300	0.909
600	1.651
1200	3.098

Standard Curve (Sample)

This standard curve is only for demonstration purposes. A standard curve should be generated for each assay

ADDITIONAL INFORMATION

Related Product Information for IL18R1 elisa kit	This IL-18Ralpha ELISA Kit, Mouse is an enzyme-linked immunosorbent assay for the quantitative measurement of Mouse IL-18Ralpha protein in Lysate. It contains recombinant Mouse IL-18Ralpha, and antibodies raised against the recombinant protein. This ELISA kit is complete and ready-to-use. Background: Interleukin-18 receptor 1 (IL18R1) also known as CD218 antigen-like family member A, CDw218a, IL1 receptor-related protein, and CD218a, is an interleukin receptor of the immunoglobulin superfamily. IL18R1 is found expressed in the lung, leukocytes, spleen, liver, thymus, prostate, small intestine, colon, placenta, and heart, and is absent from the brain, skeletal muscle, pancreas, and kidney. A high level of expression is found in Hodgkin disease cell lines. This receptor is specifically bound to interleukin 18 (IL18) and is essential for IL18 mediated signal transduction. IL18R1 contains 3 Ig-like C2-type (immunoglobulin-like) domains and 1 TIR domain. It is a single-pass type I membrane protein. IFN-alpha and IL12 are reported to induce the expression of this receptor in NK and T cells. The increased expression of IL18R1 may contribute pathogenically to disease and is therefore a potential therapeutic target. The absence of a genetic association in the IL18R1 gene itself suggests regulation from other parts of the genome, or as part of the inflammatory cascade in multiple sclerosis without a prime genetic cause.
