

LY6G6D recombinant protein

Recombinant Human LY6G6D Protein (His Tag)

CATALOG #
AAA259208

HOST
HEK293 Cells

PRODUCT SYNONYMS

LY6G6D; Recombinant Human LY6G6D Protein (His Tag); DADB-110M10.6 Protein; Human; G6D Protein; LY6-D Protein; MEGT1 Protein; NG25 Protein; LY6G6D recombinant protein

PRODUCT SPECIFICATIONS

Host	HEK293 Cells
Purity/Purification	>= 90% as determined by SDS-PAGE.
Form/Format	Lyophilized from sterile PBS, pH 7.4. Normally 5%-8% trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.
Species	Human
Predicted N Terminal	His
Endotoxin	<1.0 EU per ug protein as determined by the LAL method.
Protein Construction	A DNA sequence encoding the Human LY6G6D (O95868)(Asn20-Asn103) was expressed, with a polyhistidine tag at the N-terminus.
Activity	Immobilized Anti-ly6g6d human IgG1 at 2 ug/mL (100 uL/well) can bind Recombinant Human LY6G6D Protein (His Tag) , the EC50 is 10-30 ng/mL.
Preparation and Storage	Samples are stable for up to twelve months from date of receipt at -20 degree C to -80 degree C. Store it under sterile conditions at -20 degree C to -80 degree C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

IMAGES

Application Data

Immobilized Anti-ly6g6d human IgG1 at 2 ug/mL (100 uL/well) can bind Recombinant Human LY6G6D Protein (His Tag) (#AAA259208), the EC50 is 10-30 ng/mL.

Application Data

ADDITIONAL INFORMATION

Related Product Information for LY6G6D recombinant protein	The Lymphocyte Antigen 6 Family Member G6D (LY6G6D) is a member of the LY6 family of proteins (typically 70-80 amino acids), mostly GPI-anchored to the cell surface. Regulated by the JAK-STAT5 and RAS-MEK-ERK cascades and belonging to a cluster of leukocyte antigens located in the MHC III region on chromosome 6, LY6G6D demonstrates selective expression in colorectal cancer (CRC), particularly the microsatellite stable subtype, with minimal to no expression in normal tissues. LY6G6D expression is also enhanced in diseases characterized by systemic immune suppression, such as autosomic dominant monocytopenia. LY6G6D up-regulation was predominant in CRCs characterized by an enrichment of immune suppressive regulatory T-cells and limited PD-1/PD-L1 immune checkpoint receptors, demonstrating its potential as a target for novel T-cell-dependent bispecific antibodies that can redirect T-cell effector function to colorectal tumors.

NCBI AND UNIPROT INFORMATION

NCBI GI #	51243049
NCBI GeneID	58530
NCBI Accession #	NP_067069.2
NCBI GenBank Nucleotide #	NM_021246.2
UniProt Accession #	O95868; Q4VX50; A2BEY8; B0UXC1; B0V019; B0V1Y6
Molecular Weight	13,691 Da
NCBI Official Full Name	lymphocyte antigen 6 complex locus protein G6d
NCBI Official Synonym Full Names	lymphocyte antigen 6 complex, locus G6D
NCBI Official Symbol	LY6G6D
NCBI Official Synonym Symbols	G6D; NG25; LY6-D; MEGT1; C6orf23
NCBI Protein Information	lymphocyte antigen 6 complex locus protein G6d; protein Ly6-D; lymphocyte antigen-6 G6D; megakaryocyte-enhanced gene transcript 1 protein
UniProt Protein Name	Lymphocyte antigen 6 complex locus protein G6d
UniProt Gene Name	LY6G6D
UniProt Synonym Gene Names	C6orf23; G6D; MEGT1; NG25; Protein Ly6-D
UniProt Entry Name	LY66D_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
