

Human Apolipoprotein A1 ELISA Kit | APOA1 elisa kit

Human Apolipoprotein A1 ELISA Kit

CATALOG #
AAA263020

REACTIVITY
Human

PRODUCT SYNONYMS

Apolipoprotein A1; Human Apolipoprotein A1 ELISA Kit; Apolipoprotein A-I; Apo-AI; ApoA-I; APOA1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	The Human Apolipoprotein A1 ELISA Kit allows for the detection and quantification of endogenous levels of natural and/or recombinant Human Apolipoprotein A1 proteins within the range of 3120 pg/ml - 200000 pg/ml.
Sequence Length	267
Samples	Cell Culture Supernates, Serum, Plasma, Urine
Sensitivity	<50 pg/ml
Preparation and Storage	Shipped and store at 4 degree C for 6 months, store at -20 degree C for one year. Avoid freeze/thaw cycles.

ADDITIONAL INFORMATION

Related Product Information for APOA1 elisa kit	Principle of the Assay: The Human Apolipoprotein A1 ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of Human Apolipoprotein A1 in Cell Culture Supernates, Serum, Plasma, Urine. This assay employs an antibody specific for Human Apolipoprotein A1 coated on a 96-well plate. Standards and samples are pipetted into the wells and Apolipoprotein A1 present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-Human Apolipoprotein A1 antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of Apolipoprotein A1 bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm. Background: Apolipoprotein A1 is a protein that in humans is encoded by the APOA1 gene. This gene encodes apolipoprotein A-I, which is the major protein component of high density lipoprotein (HDL) in plasma. The encoded preproprotein is proteolytically processed to generate the mature protein, which promotes cholesterol efflux from tissues to the liver for excretion, and is a cofactor for lecithin cholesterolacyltransferase (LCAT), an enzyme responsible for the formation of most plasma cholesteryl esters. This gene is closely linked with two other apolipoprotein genes on chromosome 11. Defects in this gene are associated with HDL deficiencies, including Tangier disease, and with systemic non-neuropathic amyloidosis. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein.

NCBI AND UNIPROT INFORMATION

NCBI GI #	4557321
NCBI GeneID	335
NCBI Accession #	NP_000030.1
NCBI GenBank Nucleotide #	NM_000039.2
UniProt Accession #	P02647; Q6LDN9; Q6Q785; Q9UCS8; Q9UCT8; A8K866
Molecular Weight	30,778 Da
NCBI Official Full Name	apolipoprotein A-I isoform 1 preproprotein
NCBI Official Synonym Full Names	apolipoprotein A1
NCBI Official Symbol	APOA1
NCBI Official Synonym Symbols	apo(a)
NCBI Protein Information	apolipoprotein A-I
UniProt Protein Name	Apolipoprotein A-I
UniProt Gene Name	APOA1
UniProt Synonym Gene Names	Apo-AI; ApoA-I; ProapoA-I
UniProt Entry Name	APOA1_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
