IHC (Immunohistochemistry)

Immunohistochemical analysis staining in human liver carcinoma formalin fixed paraffin-embedded tissue section. The section was pre-treated using pressure cooker heat antigen retrieval with sodium citrate buffer (0.01M, pH=6) for 3 minutes. The section was detected using rabbit primary antibody, and Goat Anti-Mouse/Rabbit IgG (H&L)-HRP polymer (Ready to use). The section was then counterstained with haematoxylin and mounted with Neutral Gum.
