

Human Prorenin ELISA Kit

Human Prorenin ELISA Kit for Plasma/Serum

CATALOG #
AAA266526

REACTIVITY
Human

PRODUCT SYNONYMS

Prorenin; Human Prorenin ELISA Kit for Plasma/Serum; Prorenin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	plasma samples and serum
Detection Range	0.02-10ng/ml
Sensitivity	0.013ng/ml
Detection Target	Prorenin
Cross-Reactivity	No cross reaction with mouse or rat.
Preparation and Storage	Store at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for Prorenin elisa kit

Human Prorenin Antigen ELISA Kit, HPRENKT.
Human Prorenin ELISA Kit is intended for the quantitative determination of prorenin in plasma samples and serum. Active renin will not be detected by this assay. Prorenin is measured directly by ELISA without pretreatment of samples or conversion to renin Strip well format. Reagents for up to 96 tests.
Human prorenin will bind to the capture antibody coated on the microtiter plate. After appropriate washing steps, anti-human prorenin primary antibody binds to the captured protein. Only prorenin and not active renin will be detected by the primary antibody. Excess antibody is washed away and bound primary antibody is then reacted with the secondary antibody conjugated to horseradish peroxidase. TMB substrate is used for color development at 450nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
