Principle of the Assay: This assay employs the qualitative sandwich enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with HBsAb. Standards and samples are pipetted into the wells with a Horseradish Peroxidase (HRP) conjugated HBsAb. Following a wash to remove any unbound reagent, a substrate solution is added to the wells and color develops in proportion to the amount of HBsAg bound in the initial step. The color development is stopped and the intensity of the color is measured.
