

Human Albumin ELISA Kit

Human Albumin ELISA Kit

CATALOG #
AAA269045

REACTIVITY
Human

PRODUCT SYNONYMS

Albumin; Human Albumin ELISA Kit; Albumin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	does not react with other cytokines.
Samples	Serum, plasma, cell culture supernatant, perfusion fluid, urine, amniotic fluid, ascites, cerebrospinal fluid, pleural effusion, tissue homogenate and other types of samples
Sensitivity	0.156ng/ml
Preparation and Storage	Store at 4 degree C Shipping: Gel Ice

ADDITIONAL INFORMATION

Related Product Information for Albumin elisa kit

Background: Albumin is the most abundant protein in plasma, accounting for about 60% of total plasma protein (about 40 mg/ml). Albumin, with a molecular weight of about 66kDa, is mainly synthesized by the liver and plays an important role in maintaining plasma colloid osmotic pressure. Albumin maintains fluid balance between the vascular space and extravascular tissues, and is a transporter protein that carries fatty acids, bilirubin, and various drugs and hormone molecules in the body. Usually, only a very small amount of albumin escapes glomerular reabsorption and is excreted into urine. Many diseases that cause kidney damage can cause excess serum proteins, including albumin, to be excreted by the kidneys into the urine.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
