

## Human ASP (Acylation Stimulating Protein) ELISA Kit | ASP elisa kit

Human ASP (Acylation Stimulating Protein) ELISA Kit

CATALOG #  
**AAA270420**

REACTIVITY  
**Human**

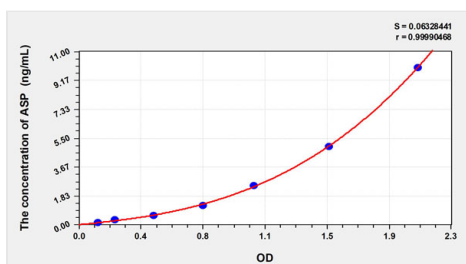

### PRODUCT SYNONYMS

ASP (Acylation Stimulating Protein); Human ASP (Acylation Stimulating Protein) ELISA Kit; Acyl Stimulation Protein; ASP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                  |
|-------------------------|------------------------------------------------------------------|
| Reactivity              | Human                                                            |
| Samples                 | serum, plasma and other biological fluids                        |
| Assay Type              | Sandwich                                                         |
| Detection Range         | 0.16-10 ng/mL                                                    |
| Sensitivity             | 0.067 ng/mL                                                      |
| Intra-assay Precision   | CV%<8%                                                           |
| Inter-assay Precision   | CV%<10%                                                          |
| Preparation and Storage | Store at 2-8 degree C. Stable for 6 months from date of receipt. |

### ADDITIONAL INFORMATION

#### Related Product Information for ASP elisa kit

Principle of the assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Acylation Stimulating Protein(ASP). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Acylation Stimulating Protein(ASP). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Acylation Stimulating Protein(ASP), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$  10nm. The concentration of Acylation Stimulating Protein(ASP) in the samples is then determined by comparing the OD of the samples to the standard curve.

#### Product Categories/Family for ASP elisa kit

Signal transduction; Metabolic pathway; Infection immunity

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
