

Human Anti Smith antibody ELISA Kit | SM elisa kit

Human Anti Smith antibody ELISA Kit

CATALOG #
AAA27192

REACTIVITY
Human

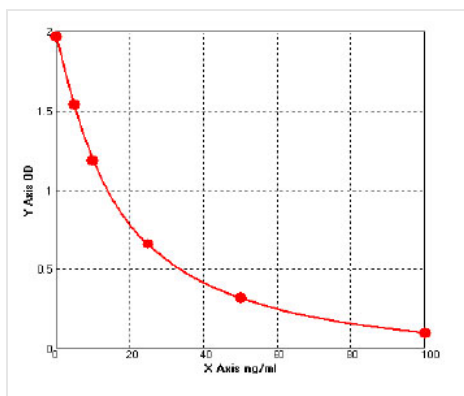

PRODUCT SYNONYMS

Anti Smith antibody ; Human Anti Smith antibody ELISA Kit; SM elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of ASAb. No significant cross-reactivity or interference between ASAb and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between ASAb and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for SM elisa kit	Principle of the Assay: ASAb ELISA kit applies the competitive enzyme immunoassay technique utilizing Smith antigen and an ASAb-HRP conjugate. The assay sample and buffer are incubated together with ASAb-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ASAb concentration since ASAb from samples and ASAb-HRP conjugate compete for the Smith antigen binding site. Since the number of sites is limited, as more sites are occupied by ASAb from the sample, fewer sites are left to bind ASAb-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ASAb concentration in each sample is interpolated from this standard curve. Intended Uses: This ASAb ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human ASAb. This ELISA kit for research use only, not for therapeutic or diagnostic applications!
Product Categories/Family for SM elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
