

Rat SAP (Serum Amyloid P Component) ELISA Kit | SAP elisa kit

Rat SAP (Serum Amyloid P Component) ELISA Kit

CATALOG #
AAA274211

REACTIVITY
Rat

PRODUCT SYNONYMS

SAP (Serum Amyloid P Component); Rat SAP (Serum Amyloid P Component) ELISA Kit; APCS; PTX2; Pentaxin-Related; 9.5S Alpha-1-Glycoprotein; SAP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of Rat SAP. No significant cross-reactivity or interference between Rat SAP and analogues was observed.
Assay Type	Sandwich
Detection Range	6.25-400 ng/mL
Sensitivity	2.44 ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay)? CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess intra-assay precision.
Inter-assay Precision	Inter-assay Precision (Precision between assays)? CV%<10%. Three samples of known concentration were tested in forty separate assays to assess inter-assay precision.
Preparation and Storage	Store at 2-8 degree C. Stable for 6 months from date of receipt.

ADDITIONAL INFORMATION

Related Product Information for SAP elisa kit

Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Serum Amyloid P Component(SAP). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Serum Amyloid P Component(SAP). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Serum Amyloid P Component(SAP), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Serum Amyloid P Component(SAP) in the samples is then determined by comparing the OD of the samples to the standard curve.
