

Human Trimethylamine-N-oxide ELISA Kit | TMAO elisa kit

Human Trimethylamine-N-oxide ELISA Kit

CATALOG #
AAA27466

REACTIVITY
Human

PRODUCT SYNONYMS

Trimethylamine-N-oxide; Human Trimethylamine-N-oxide ELISA Kit; TMAO elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of TMAO. No significant cross-reactivity or interference between TMAO and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between TMAO and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for TMAO elisa kit	Principle of the Assay: TMAO ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-TMAO antibody and an TMAO-HRP conjugate. The assay sample and buffer are incubated together with TMAO-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TMAO concentration since TMAO from samples and TMAO-HRP conjugate compete for the anti-TMAO antibody binding site. Since the number of sites is limited, as more sites are occupied by TMAO from the sample, fewer sites are left to bind TMAO-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TMAO concentration in each sample is interpolated from this standard curve. Intended Uses: This TMAO ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human TMAO. This ELISA kit for research use only, not for therapeutic or diagnostic applications!
--	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
